

Product news: Flexter rail

## **Taking workstation organisation and integrating technology to the next level**

**Assmann Büromöbel will be presenting the best in technology integration for open plan offices and workbenches at ORGATEC 2016: the new Flexter organisational rail designed to be mounted on various Assmann Büromöbel desk systems can house both technical devices and components for better workstation organisation. This keeps the desk surface free so that it can be fully utilised for work processes.**

Technical devices take up space on desks in the office. The Flexter organisational rail tidies everything away, without reducing the number of hardware components. Lights, monitor holders, additional power sockets, screens, storage trays and more can all be easily mounted onto this sophisticated system. Where and in which order these are positioned is up to the user to decide, in line with their needs. Cables are elegantly tucked away in the cable duct with a brush seal between the Flexter rail and the desktop. This is especially useful in back-to-back workstations or bench solutions. Depending on the purchase period and line of desks purchased, desks may also be upgraded with a Flexter rail at a later date.

### **Perfectly organised workstations**

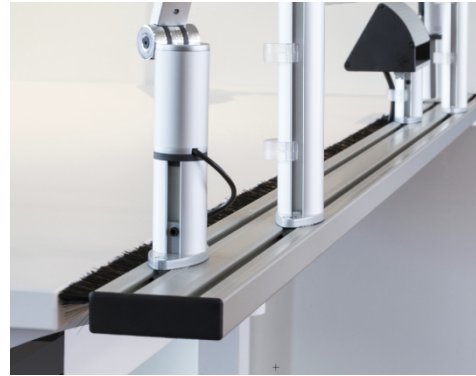

“Our individual workstations are getting smaller, making better organisation a necessity,” says Günter Osterhaus, Head of Planning and Projects Management at Assmann Büromöbel, who knows the importance of accurately predicting the future of work environments. “Designed to address these new challenges, Assmann Büromöbel has created the Flexter organisational rail as a useful way to utilise the smaller space available at workstations.

The planning data for the Flexter organisational rails will be available right after ORGATEC 2016.
